

SCIENTIFIC TRIP TO KOREK

In a rainy day we went to Korek telecom which is one of the largest communication companies in Iraq and Kurdistan region. For the purpose of learning and experience a new way of studying and understanding the topics.

tour

After the lecture we got a tour of the building and the information and we learnt in university and talking about it we saw them in a close way it was new experience and interesting. We saw the server rooms and which was full of conditioners to keep the temperature of the room server and showed us how they work after that we went to a room which all signals and error would go to that room and told us how they work.

lecture

They gave us more information as we should get IT department to have difference as we will be the experts of the field. The lecturer talked about radio waves and its damages and helped us to understand some of the misunderstanding things we hear daily as the effects of radio waves and other waves and how people have heard it in a wrong way for example if you sleep in a room that your phone is it affects you and harm your body. And He told us how the communication towers work and some difference between our country and other countries and why in some places we can not reach service.

Inside The Issues

- we talked about towers and communication how people think of it and what are the problems that the company get like and they told us about their experince what they deal with daily and how they mange it for example all the talks about towers and the signal that causes harms

solution

as students we had some questions and suggests like dealing with all of those towers and causes and tried to find solutions

in conclusion

In conclusion it was day full of joy and experience and learning trips like this will help us to understand the topics more as we see them closer which makes us to learn more.
